

Arrow ECS Symantec Solutions

# Accelerating the virtualisation strategy

# Symantec solutions for a virtualised environment

Symantec infrastructure solutions help enterprises protect and manage their information and deal with the challenges of operational risk and complexity. Their advanced technologies for storage, systems management, data protection, disaster recovery, security and compliance, enable organisations to automate their IT operations and improve their service levels.

We know virtualisation helps reduce costs and improve efficiencies, but the complementary Symantec solutions provide the infrastructure foundation you need to get the most out of your virtualisation investments.

In the data centre, Symantec software and expertise enable you to standardise and automate processes for backup and disaster recovery, storage management,

and security across heterogeneous physical and virtual environments.

Symantec endpoint virtualisation solutions enable you to offer a portable user experience across multiple client platforms, and transform the way you deliver applications and manage the exploding array of clients and devices. Whether it's increasing server and storage utilisation in a virtualised data

centre, or migrating from traditional client architectures to cloud computing, we can you select the right strategy to achieve the desired results.

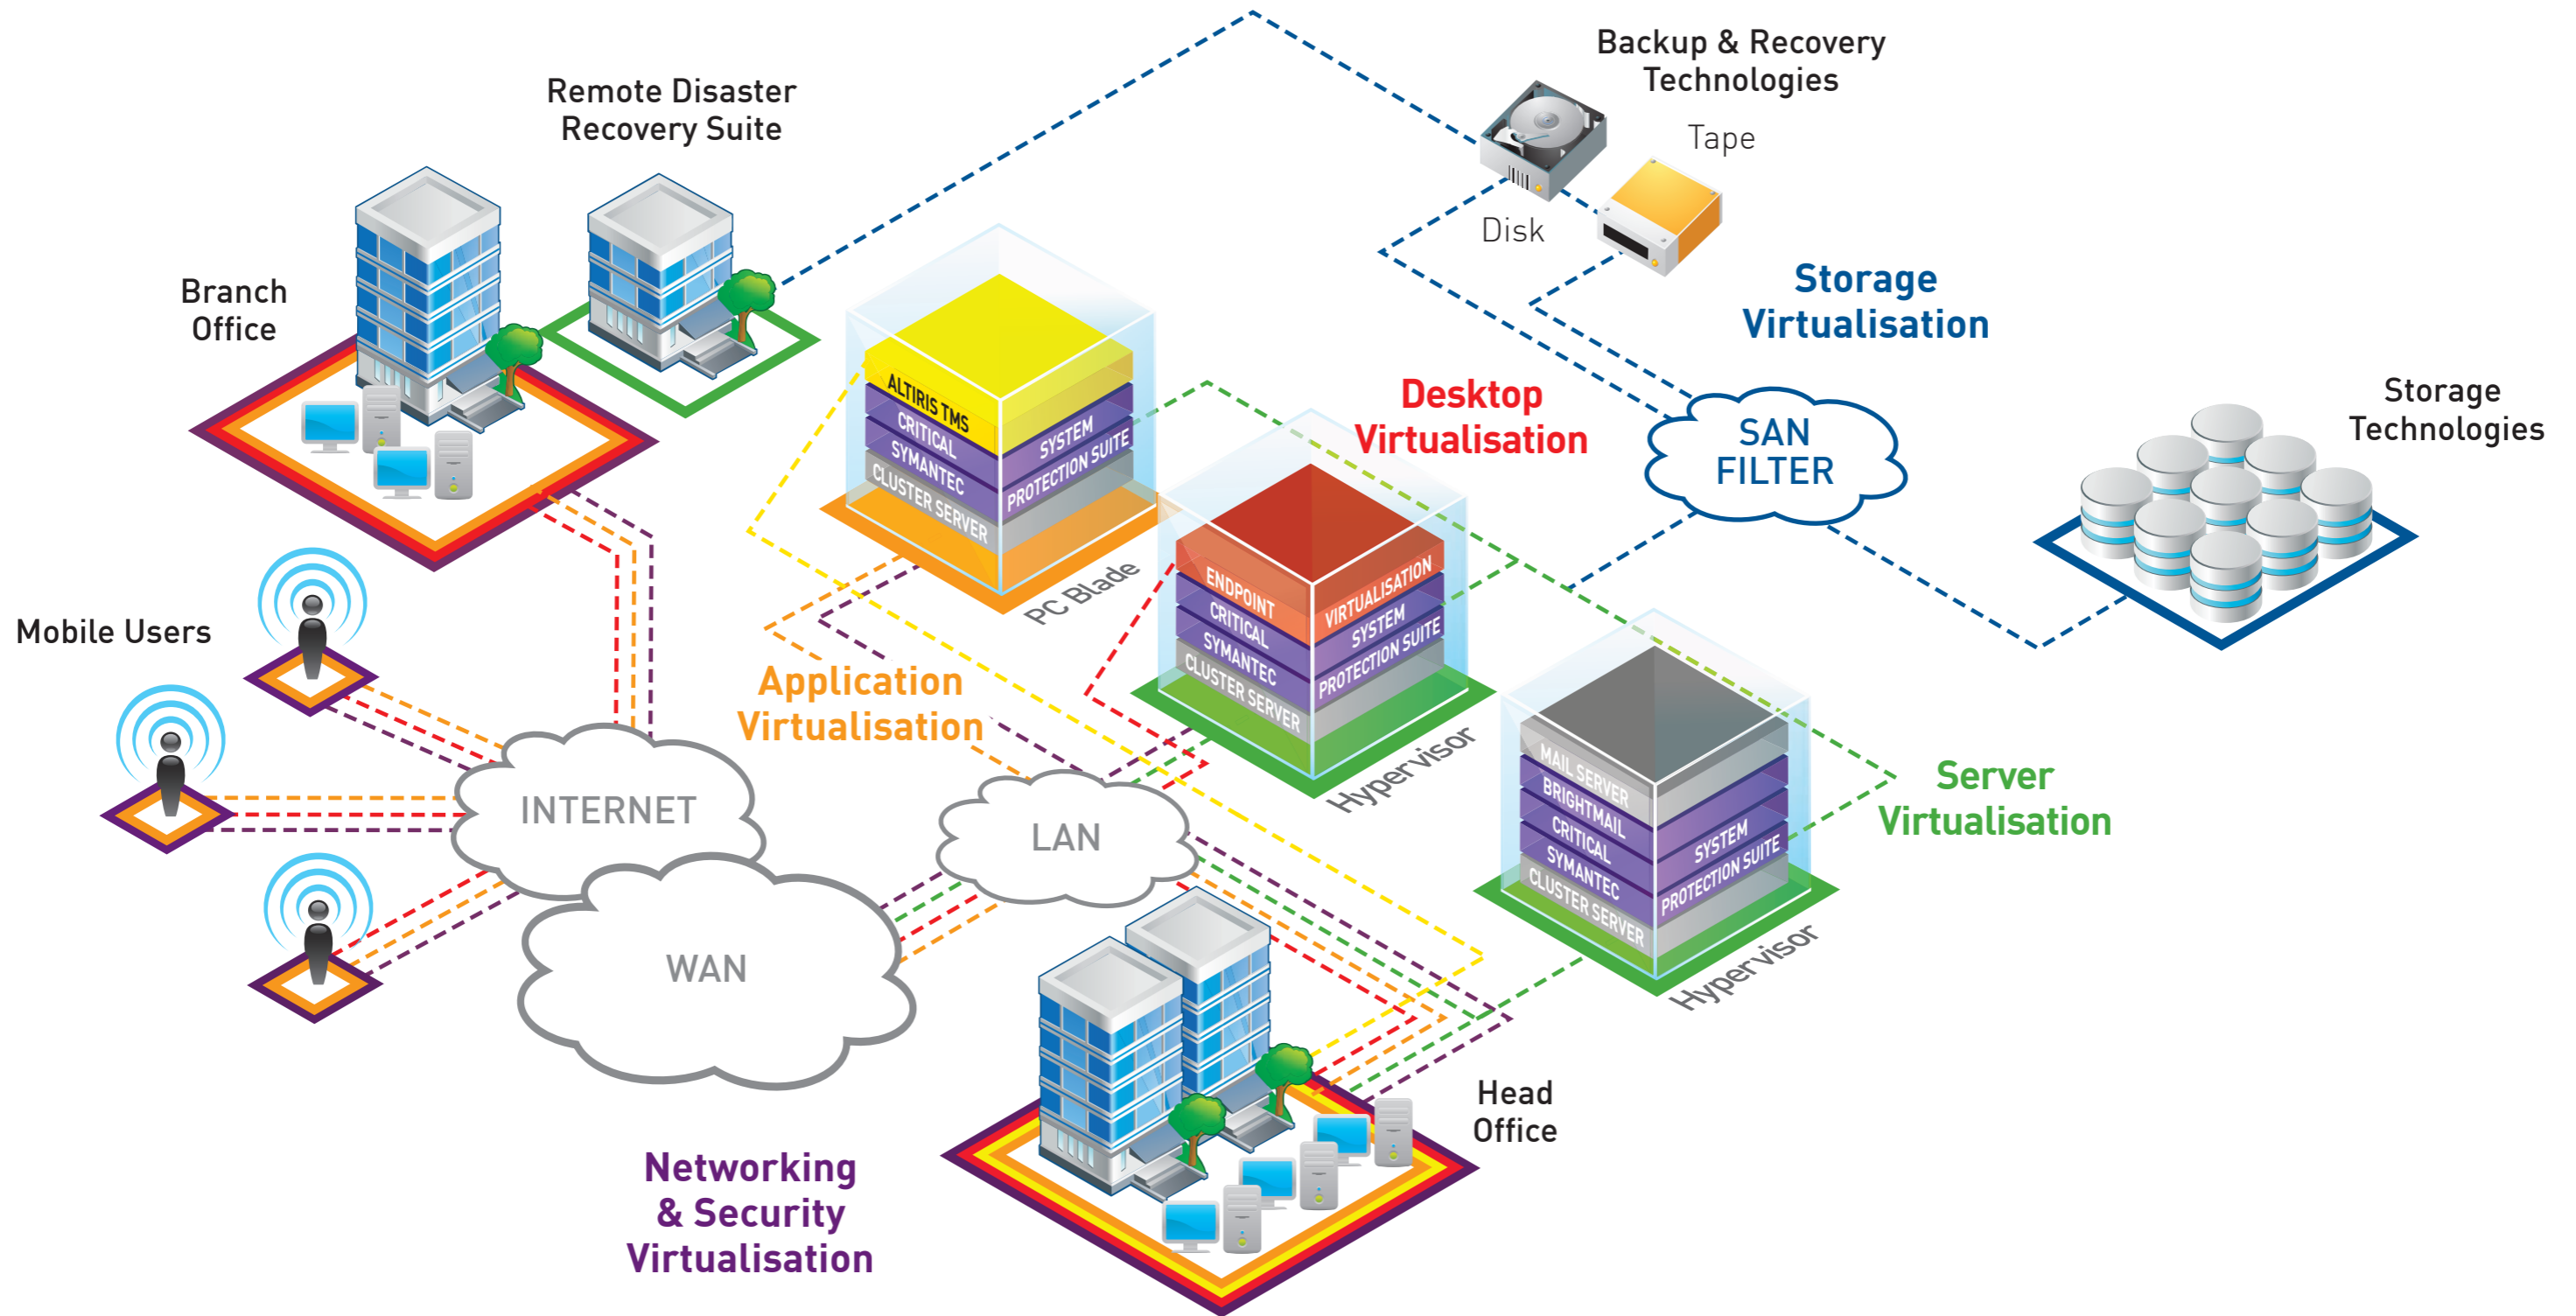

No matter what stage of transition your organisation currently inhabits, we can help you with our specialist expertise and ensure that the process of virtualising your infrastructure is smooth and successful.

## The 5 areas of virtualisation

<h3>Server Virtualisation</h3>  <p>Dramatically reducing the number of physical servers by enabling multiple 'virtual servers' to be run on a single or reduced number of shared machines.</p>	<h3>Storage Virtualisation</h3>  <p>Removing the storage capacity from the individual users or servers and instead deployed in single or shared pools.</p>	<h3>Application Virtualisation</h3>  <p>By enabling multiple applications to be run on a single machine, or a reduced number of servers, contained within a dedicated server farm.</p>	<h3>Desktop Virtualisation</h3>  <p>Consolidation of large estates of desktop PCs onto a centralised server farm where every user has their own 'virtual' PC. This helps reduce cost of expensive, dedicated PC.</p>

## Network & Security Virtualisation

When implementing any virtualisation deployment the impact on security threats, firewalls, access and remote site security needs to be considered. Symantec is the leader in Security Solutions and have a host of products to cover these areas.

## About Arrow ECS

Arrow ECS is an information technology distributor specialising in providing enterprise-class solutions and services focused on data storage, network security, enterprise software, virtualisation and access infrastructure. Working with our channel partners, we optimise the efficiency with which organisations can store, manage, protect and deploy their data, equipping them with secure access to business-critical information any time, from any location, on any device.

Our deep technical understanding is reinforced by strong business relationships and continually monitoring rapidly changing IT markets for the latest product advances and emerging technologies. Through close alliances with the world's leading IT vendors, we deliver innovative solutions, complemented by an impressive portfolio of expert professional services and IT training.

With over 25 successful years in the IT industry, we have the skills and experience to support our channel partners from initial consultation, planning and design, through engineering build to implementation. In doing so, we enable our partners to deliver even more value to increase their customers' competitive edge.

Arrow Enterprise Computing Solutions (ECS) is a business segment of Arrow Electronics Inc.
